

VRCHAT STREAMING QUICK GUIDE

Put the Sugar or Spice big screen in VRChat with OBS + VRCDN. No Twitch or Streamlabs needed.

WHAT YOU NEED

SUGAR OR SPICE

OBS STUDIO

VRCDN ACCOUNT

VRCHAT + AVPRO SCREEN

A. BUILD YOUR OBS SCENE

1

Open the Big Screen

Create the paid room, then click Open Big Screen in the host controls.

2

Create an OBS scene

Name it Sugar or Spice. In Sources, add Browser Source and paste the Big Screen URL. Window Capture also works.

3

Fit it to the canvas

Set the source to 1920 x 1080, then use Transform > Fit to Screen (Ctrl+F).

4

Keep this site silent

Mute the Browser Source. In Settings > Audio, leave Desktop Audio and Mic/Aux disabled unless you intentionally want other audio.

B. RECOMMENDED OBS PRESET

Use this clean, stable preset for the game screen.

SERVICE	VRCDN.Live
SERVER	Automatic
ENCODER	H.264
RATE CONTROL	CBR
VIDEO BITRATE	3500 Kbps
KEYFRAME	1 second
RESOLUTION	1920 x 1080
FRAME RATE	30 FPS

Paste the private Stream Key from your VRCDN Live page. Never send that key to guests.

C. SEND THE STREAM TO VRCHAT

1. Click Start Streaming in OBS and wait for VRCDN to show Connected.
2. Copy a VRCDN playback URL - never the RTMP ingest address or Stream Key.
3. In your KOTR/VRChat world's video player, paste the VRCDN URL and press Play.
4. PC/PCVR: use the RTSP playback URL shown by VRCDN. Quest/Android: use its HTTPS playback URL.
5. The world screen must use AVPro for live video. VRCDN is on VRChat's approved host list.

IF THE SCREEN IS BLANK: Confirm OBS is live, use the platform-correct URL, and wait 5 seconds before reloading it.
